CompanyAI Demo Company Handbook

Version 1.0 - Internal Policy Reference

This handbook is the official unstructured knowledge source used by the CompanyAI RAG agent. It is a demonstration document for learning ADK, local LLMs, Qdrant, RAG, role-based access, and multi-agent orchestration.

Section	Topic
1	Employment Categories and Records
2	Attendance and Working Hours
3	Leave Policy
4	Remote Work
5	Internship Program and Reporting
6	Performance and Training
7	Recruitment and Onboarding
8	Payroll and Expenses
9	IT Assets and Information Security
10	Projects, Tasks and Accountability
11	Documents, Privacy and Access Control
12	Conduct, Complaints and Exit

1. Employment Categories and Records

Company employment categories include intern, probation, permanent, contract, and part-time. Every worker must have a unique employee or intern code and an active HR record before receiving company-system access.

HR owns the official employee lifecycle record. HR may create employee records, change employment status, process joining or exit changes, and administer CompanyAI login credentials. Other roles must not create, update, or delete employee login credentials.

A manager may view records for direct reports when required for legitimate management work. Employees and interns may view their own profile information. Sensitive information must follow least-privilege access.

Intern-to-permanent conversion requires completion of the internship period, satisfactory performance evaluation, acceptable attendance, completion of mandatory reports and training, manager recommendation, and final HR approval.

2. Attendance and Working Hours

Standard office hours are 9:00 AM to 5:30 PM on working days unless a department has an approved alternative schedule. Employees should record check-in and check-out through the company attendance process.

Arrival after 9:15 AM is treated as late unless approved by a manager or covered by an official flexible schedule. Repeated lateness may be discussed during performance review.

Unapproved absence must be reported to the manager and HR. Attendance records are structured company records and should be retrieved from the attendance system rather than guessed from policy text.

Managers may review attendance for direct reports. HR may review attendance across the company for legitimate HR administration.

3. Leave Policy

Permanent employees receive 20 annual leave days, 10 sick leave days, and 7 casual leave days per leave year unless a signed contract specifies otherwise. Intern leave entitlements may be lower and are recorded in the structured leave system.

Leave requests must have sufficient balance unless HR records an approved exception. Planned annual leave should normally be requested in advance. Sick leave should be reported as soon as practical.

A leave request is not considered approved until an authorized manager or HR representative approves it. The AI assistant may validate records and policy, but it must not claim approval when the structured request is still pending.

Leave balance is a structured personal record. Policy answers explain general rules; actual remaining balance must come from the relational database.

4. Remote Work

Remote work is not automatic. Employees and interns require written manager approval unless their role is covered by an approved remote-work arrangement.

Remote work approval and leave approval are separate processes. An approved remote-work day must not be treated as annual or sick leave.

Remote workers remain responsible for availability, security controls, meetings, task delivery, and any required daily progress updates.

5. Internship Program and Reporting

Every intern is assigned a training track and supervisor. Internship progress is evaluated through attendance, training completion, project work, daily progress where required, monthly reports, and manager feedback.

Interns submit their monthly progress report by the last working day of each month. If the final calendar date is a weekend or company holiday, the deadline is the preceding working day.

The team lead reviews the monthly internship report within 2 working days after submission. If changes are requested, the intern submits the revised report within 1 working day of receiving feedback.

Daily progress updates do not replace the monthly report. Missing reports may affect the internship evaluation and conversion recommendation.

Intern conversion to permanent employment is not automatic. It requires an available role, satisfactory evaluation, HR approval, and management approval.

6. Performance and Training

Performance reviews consider work quality, delivery, collaboration, attendance, learning progress, responsibility, documentation, and role-specific goals.

Managers provide performance feedback for their direct reports. HR can access performance data when required for formal review or employee lifecycle decisions.

Mandatory training may include information security, workplace conduct, and role-specific technical learning. Assigned mandatory training should be completed by its due date.

Training recommendations may be informed by skill gaps, role expectations, performance feedback, and project requirements.

7. Recruitment and Onboarding

Recruitment records include candidate details, application stage, interviews, results, offers, and onboarding status. Recruitment and HR personnel may access these records according to their responsibilities.

A candidate is not an employee until joining requirements are completed and HR creates the official employee record.

Onboarding may include identity documentation, contract completion, policy acknowledgement, user credentials, IT asset allocation, security training, department assignment, manager assignment, and project onboarding.

8. Payroll and Expenses

Payroll is confidential. Employees and interns may view their own payroll record. HR and authorized Finance personnel may view payroll required for their duties. Managers do not receive unrestricted salary access

merely because they manage a team.

Expense claims require a category, amount, description, and claim date. Finance reviews claims and records approval or rejection.

The AI assistant may display authorized payroll or expense records, but it must not infer missing salary, bonus, allowance, or reimbursement values.

9. IT Assets and Information Security

Company laptops, monitors, accounts, and licensed software remain company property unless explicitly transferred in writing.

IT maintains asset assignments. Employees are responsible for reasonable care of assigned equipment and must report loss, damage, security incidents, or access problems promptly.

Users must not share passwords. Credentials should be unique to each user. CompanyAI demonstration credentials are for this local learning project only and must not be reused for real systems.

Access should follow least privilege. Sensitive HR, payroll, audit, and personal data must not be exposed to unauthorized roles.

10. Projects, Tasks and Accountability

Projects contain defined members, roles, tasks, priorities, statuses, and due dates. Employees are responsible for keeping assigned work status reasonably current.

Managers may use project information together with attendance and performance information for operational planning, but each source remains distinct.

Overdue tasks should be identified from structured project records rather than inferred from policy documents.

11. Documents, Privacy and Access Control

Employee contracts, internship reports, certificates, policies, and company documents have visibility rules. HR-only documents must not be shown to ordinary employees or interns.

Company policies may be indexed in the vector database for semantic retrieval. Personal employee records, payroll values, leave balances, attendance, and credentials belong in structured systems and should not be placed into the public policy vector collection.

CompanyAI must apply both conversational routing and tool-level permission checks. Tool-level authorization is mandatory because model instructions alone are not a security boundary.

12. Conduct, Complaints and Exit

Employees and interns are expected to act professionally, respect colleagues, protect confidential information, follow lawful company instructions, and avoid harassment or discrimination.

Workplace concerns should be reported through the appropriate manager or HR channel. Sensitive complaints should be handled privately.

During exit, HR coordinates status changes, project handover, return of IT assets, final payroll or expense processing, and required documents. System access should be removed or disabled according to the approved exit process.

All sensitive administrative actions should produce an audit trail where practical.

RAG Usage Note

This handbook explains policies and procedures. It intentionally does not contain every employee's personal balance, salary, attendance, task, or credential. Those facts belong in the relational database. The CompanyAI supervisor should combine the Policy RAG Agent with structured-data agents when a user asks a question that requires both policy and personal/company records.
